

# Flow-saver<sup>®</sup>

Water Management System

New!

New from Warner Howard is Flow-saver, an innovative, award-winning product which will help you save water and maintain hygiene in the washroom. Flow-saver is an intelligent water management system which uses an infra-red movement sensor and a totally flexible programmer to ensure that the minimum amount of water is used, whilst maintaining stringent hygiene standards. It prevents unnecessary urinal flushing, saves money for the end user and is also better for the environment.

# Flow-saver

## Features:

- Can save up to 96% water compared to an uncontrolled cistern
- Saves up to 30% water compared to a non-programmable system
- Can be programmed to flush only during operating hours
- Separate programmer ensures a totally flexible system for the specific needs of the premises
- Hygiene flush every 12 hours to ensure standards are maintained when no users are present
- Infra-red sensor range of 3m
- Available in white, polished and brushed chrome
- Awarded the Waterwise Marque for products which reduce water wastage 
- 12 months warranty (excluding batteries)

## Specification:

**Operation:** Battery operated (4 x AA lithium batteries)

**Dimensions (mm):** 47(D) 129 (Diameter)

## Materials:

**Cover:** ABS plastic. Polished and brushed chrome versions are chrome plated
